

“Back” button for web links

If I navigate between screen within the app I can use the back button in the header of the simulator. However, if I link an icon to an external page, once on the page I have no option to go back – how can this be changed?

On web-apps it is almost impossible to change this. You have to use the Safari arrow to go backwards. But when we put the app in the store, we will do this differently, so that you do not leave the app. There will be a close button to close the website.
